

disassembling screw can be screwed and at least one opening in which an assembling screw can be inserted so that the assembling screw engages a thread provided in the cylinder head,
wherein:

C
when the disassembling screw is tightened, the disassembling screw abuts the cylinder head and transmits a disassembling force to the collar section so that the assembling device with the fuel injector inserted into the assembling device is extracted from the mounting hole, and

a hold-down force is transmitted to the collar section by tightening the assembling screw, the hold-down force being such that the assembling device with the fuel injector inserted into the assembling device is held down in the mounting hole.

- ✓ 15. (Amended) The device according to claim 11, wherein:

C
a plurality of peripherally distributed openings is arranged on the collar section, each of the plurality of peripherally distributed openings corresponding to an assembling screw.

- 3 17. (Amended) The device according to claim 11, wherein:

the at least one thread and the at least one opening are dimensioned so that the assembling screw can be used as a disassembling screw.

20. (Amended) The device according to claim 11, wherein:

C the jacket body includes a deeply drawn metal.

Remarks

With the cancellation of claim 14, claims 11-13 and 15-20 are now pending in the above-referenced application.

Claim 20 stands rejected under 35 U.S.C. § 112, ¶2, as being indefinite for failing to particularly point out and
